

Applied Pharmaceutical Innovation

Applied Pharmaceutical Innovation (API) is a federally registered not-for-profit that endeavours to work towards unlocking the potential of later-stage innovation, strengthening Alberta and the nation's pharmaceutical development and life science sector. API addresses the missing translational expertise for university innovation, start-ups, and small and medium enterprises (SMEs) by providing technical, scientific, and regulatory supports to ensure that drug development and life sciences research can scale to the stage for investment. By leveraging its network built on a foundation of technical expertise, scientific advisory supports with regulatory and commercial expertise, as well as access to infrastructure to enable scale for companies in the sector, API is situated to enable entrepreneurs to be successful by providing affordable solutions that encourage investment, as well as creating new employment opportunities at reduced costs relative to international contract research organizations.
