

Campus Alberta Neuroscience

Campus Alberta Neuroscience

Campus Alberta Neuroscience (CAN) is a provincial organization created to support and accelerate innovative neuroscience and mental health research advances, both of pure discovery and those with the potential for commercialization, to improve brain health across Alberta. As a collaboration between the Universities of Alberta, Calgary, and Lethbridge, and with strategic partnerships in health care, patient advocacy groups and non-profit organizations, government, industry and the general public, CAN is a catalyst for forging multifaceted collaborations to create and unleash knowledge and accelerate impact.

Opportunities & Services

CAN's work in education, research and translation is focused in the areas of depression, healthy brain aging and dementia, multiple sclerosis, spinal cord injury, neuroimaging, computational neuroscience, pain, cannabis, and opioids, as well as entrepreneurship. By providing varied programming, from conferences and professional development to training initiatives and targeted team and seed grant funding, CAN is laying the foundation for Alberta to become a destination for neuroscience research, education, and innovation to improve brain health in Alberta and beyond.

Business Objectives

To set a future course for collaborative, high-impact brain health research, education and innovation across Alberta and Canada through:

- Leveraging and supporting innovative partnerships
- Educating highly talented people
- Being a hub for neuroscience and/or mental health
