## **New Aevo System™ (2019) Receives Medical Device License in Canada**

**The Aevo System™ facilitates faster tooth movement and decreases orthodontically induced tooth root resorption during orthodontic treatment.**

**EDMONTON, Alberta, Canada, June 26th, 2019** —SmileSonica Inc., global leader in non-invasive therapeutic ultrasound dental solutions, announced their new Aevo System™ (2019) has received its medical device license from Health Canada as a class II medical device. The Aevo System™ was developed to meet both patients' and dental professionals' main orthodontic challenge of accelerating orthodontic treatment safely. Canada joins a list of 35 countries in which the Aevo System™ is now commercially available.

“When we launched our first Aevo System™ in 2016 in Canada, we were warmly welcomed by the dental community. The practicing professionals and patients were instrumental in providing feedback that has been incorporated in our new Aevo System™ (2019). We thank our participating clinics and patients for all their support.” says Darryl Lesiuk, VP Corporate Development at SmileSonica Inc.

The Aevo System™ results from private clinics show an average increase of 54.8% in faster tooth movement when using wire braces and change of trays every 3-4 days when using clear aligners. This outperforms the average increase of 29% results of our original clinical trial. Equally important, Aevo System™ (2019) continues to decrease orthodontically induced tooth root resorption.

“We have learned a lot from our customers and patients. We are proud of our Team and their ability to turn these learnings into the commercially available new Aevo System™ (2019). We are excited to introduce our new system in Canada.” says Cristian Scurtescu, Founder and CEO of SmileSonica Inc.

**SmileSonica Inc.**, based in Edmonton, Alberta, Canada has grown to a global company and is ISO 13485 and MDSAP certified to design, manufacture, and distribute ultrasound therapy devices and accessories for use in dentistry. The SmileSonica Team includes Engineering, Quality & Regulatory, Manufacturing and Sales. Currently selling in Canada, Europe and Australia, SmileSonica continues to receive clinic and patient support, which has resulted in the company's success. For more information, visit [www.smilesonica.com](http://www.smilesonica.com).

**Aevo System™:** In a recent study, over 89% of orthodontic patients surveyed wished they could reduce the length of their orthodontic treatment. The Aevo System™ is clinically proven to enhance the physiological processes associated with orthodontic treatment. **Licensed Indication for Use:** “Regular use of the Aevo System™ during orthodontic treatment will facilitate faster tooth movement and decrease orthodontically induced tooth root resorption.” The Aevo System™ provides low-intensity pulsed ultrasound (LIPUS) to a patient's dental area for 20 minutes per day for the duration of the orthodontic treatment. Complementary to orthodontic braces (including wire braces and clear aligners), the Aevo System™ is battery powered, wireless, wearable, and intended for home use or on-the-go.
