

OVERVIEW

About Resverlogix

Resverlogix is developing apabetalone (RVX-208), a first-in-class small molecule that is a selective BET (bromodomain and extra-terminal) inhibitor. Apabetalone is the first therapy of its kind to have been granted U.S. FDA Breakthrough Therapy Designation – for a major cardiovascular indication – to help facilitate a time-efficient drug development program, including planned clinical trials and plans for expediting the manufacturing development strategy.

BET inhibition is an epigenetic mechanism that can regulate disease-causing genes. Apabetalone is a BET inhibitor selective for the second bromodomain (BD2) within the BET proteins. This selective inhibition of apabetalone on BD2 produces a specific set of biological effects with potentially important benefits for patients with high-risk cardiovascular disease, chronic kidney disease, COVID-19 and other indications while maintaining a well-described safety profile.

COVID-19 Program

Apabetalone is an investigational, phase 3 clinical candidate with safety data in more than 4,200 man years of treatment. As previously published, apabetalone has the potential to combat COVID-19 through a unique dual mechanism. First, apabetalone treatment prevents SARS-CoV-2 from infecting human cells; and second, it reduces the inflammation and cytokine storm response, which can result in organ damage and long-term negative impacts. Apabetalone is also being studied for important benefits for patients with high-risk cardiovascular disease, chronic kidney disease and other indications while maintaining a well-described safety profile.

Resverlogix recently announced a partnership with EVERSANA™, the pioneer of next generation commercial services to the global life sciences industry, to support planned commercialization of apabetalone in the United States, Canada (where authorization has been granted to conduct clinical studies of apabetalone for COVID-19) and/or potentially expanding to additional global markets, as Emergency Use Authorization and/or a New Drug Application or equivalent is issued or approved. More information about the clinical trial can be found here: <https://clinicaltrials.gov/ct2/show/NCT04894266>

Resverlogix common shares trade on the Toronto Stock Exchange (TSX:RVX).
